Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                         80

                                                                                                                                                                                                                                    The invention relates to gene encoding D-arabinitol dehydrogenase, isolated from Bacillus sp. IKD-5A868 strain. The protein can be expressed by standard recombinant methodologies. D-arabinitol dehydrogenase is used as a clinical diagnosing agent for mycosis. The present sequence represents the D-arabinitol dehydrogenase enzyme
                                                                                                                                                                                                                                                                                                                                                                             Claim 1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant having an improved property comprises transforming a plant with the recombinant DNA construct and growing the transformed plant, where the polynucleotide or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for producing plants with improved plant properties, e.g. improved cold, heat or drought tolerance,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cold tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; pest tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Bacterial polypeptide #2923.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ADN20270 standard; protein; 257
                                                                                                                                                                                                                                                                                                                                                                                                                                              New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.

The invention relates to a recombinant DNA construct comprising a CC promoter functional in a plant cell, where the promoter is positioned to CC provide for expression of a polynucleotide encoding a polypeptide from a CC microbial source. The invention also relates to a transformed plant CC comprising the recombinant DNA construct and a method of producing a CC transformed plant having an improved property. The plant is a crop plant CC such as maize or soybean. The method of producing a transformed plant CC recombinant DNA construct and growing the transformed plant with the CC polynucleotide or polypeptide is useful for improving plant properties. CC The recombinant DNA construct is useful for producing plant properties. CC improved plant properties, e.g. improved cold, heat or drought tolerance, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of CC content, improved yield by modification of protesynthesis or by phosphorus use and/or uptake, by modification of protesynthesis or by providing improved plant growth and development under at least one stress CC condition, improved lignin production or improved galactomannan CC production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form part form interpresent a patent of the printed specification but was obtained in electronic condition.

Genetically modified fungus is useful for producing useful products from biomass containing L-arabinose. The useful product include ethanol, lactic acid or xylitol preferably ethanol. It is also useful to ferment a carbon source such as blomass comprising agricultural or forestry products and waste products containing L-arabinose and also other pentoses or other fermentable sugars. The present sequence is T. reesei L-xylulose reductase. (Updated on 29-AUG-2003 to standardise OS field)

The present invention describes a method (M1) for producing 4-cyano-3-CC hydroxybutyric acid ester (I) from a 4-halo-3-hydroxybutyric acid ester (II) or 4-halo-3-ketobutyric acid ester (III), comprising providing (II) CC (III), and contacting (II) with a halohydrin dehalogenase and cyanide cunder conditions sufficient to form a reaction mixture for converting (II) to (I). Also described: (1) producing (M2) a 4-nucleophile comprising; (a) providing (II), (III) or amide; and (b) contacting (II) or amide for converting (II) or amide with a halohydrin dehalogenase and a nucleophile under conditions suitable to form a reaction mixture for converting (II) or amide to a 4-nucleophile substituted-3-hydroxybutyric acid or amide; or (c) contacting (III) or amide with a ketoreductase, a cofactor, a cc confortor regeneration system, a nucleophile and a halohydrin dehalogenase to form a reaction mixture for converting (III) or amide; and (2) a cc composition (IV) comprising halohydrin dehalogenase, a nucleophile, and (I) or amide. (M1) is useful for producing a 4-cyano-3-hydroxybutyric acid ester from a 4-halo-3-hydroxybutyric acid ester or 4-halo-3-c ketobutyric acid ester. (M2) is useful for producing a 4-nucleophile substituted-3-hydroxybutyric acid ester or 4-halo-3-c ketobutyric acid ester. (M2) is useful for producing a 4-nucleophile substituted-3-hydroxybutyric acid ester or 4-halo-3-c ketobutyric acid ester. (M2) is useful for producing a 4-nucleophile substituted 3-hydroxybutyric acid ester or 4-halo-3-c ketobutyric acid ester or 5-hydroxybutyric acid ester or 5-hydroxybutyric acid ester or 6-halo-3-bydroxybutyric acid ester or 6-halo-3-bydroxybutyric acid ester or 6-halo-3-c ketobutyric acid ester or 6-halo-3-bydroxybutyric acid ester or 6-halo-3-bydroxybutyric acid ester or 6-halo-3-bydroxybutyric acid ester or 6-halo-3-bydroxybutyric acid ester 6-halo-3-bydroxybutyric acid ester 6-halo-3-bydroxybutyric acid ester 7-halo-3-c 6-halo-3-bydroxybutyric acid ester 8-halo-3-bydroxybutyric acid ester 9-halo-3-hydroxybut

           CC (III) or 4-halo-3-ketobutyric acid ester (III), comprising providing (II) conditions sufficient to form a reaction mixture for converting (II) to (I). Also described: (I) producing (M2) a 4-nucleophile comprising: (a) providing (II) (III) or amide from (II) or amide, comprising: (a) providing (II), (III) or amide from (II) or amide, comprising: (a) providing (II), (III) or amide from (II) or amide, comprising: (a) providing (II), (III) or amide from (II) or amide, conditions suitable to form a reaction mixture for converting (II) or amide to a 4-nucleophile substituted-3-hydroxybutyric acid or amide; or (c) contacting (III) or amide with a ketoreductase, a cofactor, a cofactor regeneration system, a nucleophile and a halohydrin dehalogenase to form a reaction mixture for converting (III) or amide to form a reaction mixture for converting (III) or amide to a 4-composition (IV) comprising halohydrin dehalogenase and a mucleophile, and (2) a composition (IV) comprising halohydrin dehalogenase a nucleophile, and (I) or amide. (M1) is useful for producing a 4-cyano-3-hydroxybutyric acid ester from a 4-halo-3-hydroxybutyric acid ester or 4-halo-3-composition (IV) comprising halohydrin dehalogenase and a destar from a 4-halo-3-hydroxybutyric acid ester or 4-halo-3-composition (IV) comprising halohydrin dehalogenase and (I) acid ester from a 4-halo-3-hydroxybutyric acid ester or 4-halo-3-composition (IV) comprising halohydrin dehalogenase and 4-nucleophile substituted-3-hydroxybutyric acid ester or 4-halo-3-composition (IV) comprising halohydrin dehalogenase and 4-nucleophile substituted-3-hydroxybutyric acid ester or 4-halo-3-composition (IV) composition (IV) composition (IV) composition dehalogenase composition (IV) composition (IV) composition dehalogenase compositi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a method (M1) for producing 4-cyano-3-hydroxybutyric acid ester (I) from a 4-halo-3-hydroxybutyric acid este
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Producing 4-cyano-3-hydroxybutyric acid ester from 4-halo-3-hydroxybutyric acid ester, comprises contacting 4-halo-3-hyd acid ester with halohydrin dehalogenase and cyanide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Producing

It has working pH 5.5 to and working temperature 50-55 degrees C. It is stable for at least 30 minutes at 40 degrees C at pH 7. It is inhibited by mercury ions and quercetin and has a molecular weight of 76 kDa by gel filtration and kDa by SDS-PAGE. The protein can be used to provide for sufficient production of optically active 3-hydroxybutanoate esters for use as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is a NADPH-dependent carbonyl reductase. The CC polynucleotide was modified using using the method of the invention. The specification describes a method for designing a synthetic complex the predicted. The method comprises providing a starting polynucleotide, comprises provided by replacing a codon with a cC different codon to provide a modified polynucleotide, determining free cerry of folding per base of the modified polynucleotide, determining free cerry of folding per base of the modified polynucleotide, and comparing this with that of the original polynucleotide. The method is useful for CC developing nucleic acid sequences that enhance expression of the encoded crotein in a heterologous host. The design and preparation of the control of the control

                                                                                                                         S
                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                   (c) contacting (III) or amide with a ketoreductase, a cofactor, a cofactor regeneration system, a nucleophile and a halohydrin dehalogenase to form a reaction mixture for converting (III) or amide to a 4-composition (IV) comprising halohydrin dehalogenase, a nucleophile, and (2) a composition (IV) comprising halohydrin dehalogenase, a nucleophile, and (I) or amide. (M1) is useful for producing a 4-cyano-3-hydroxybutyric acid ester or 4-halo-3-kydroxybutyric acid ester or amide. (M1) and (M2) are useful for producing 4-substituted 3-hydroxybutyric acid derivatives. The present sequence represents a ketoreductase (KRED), which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  under conditions sufficient to form a reaction mixture for converting (II) to (I). Also described: (1) producing (M2) a 4-nucleophile substituted 3-hydroxybutyric acid ester or amide from (II) or amide, comprising: (a) providing (II), (III) or amide; and (b) contacting (II) or amide with a halohydrin dehalogenase and a nucleophile under conditions suitable to form a reaction mixture for converting (II) or amide to a 4-nucleophile substituted-3-hydroxybutyric acid or amide; or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Davis SC,
Newman LM,
                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a method (MI) for producing 4-cyano-3-hydroxybutyric acid ester (I) from a 4-halo-3-hydroxybutyric acid ester (II) or 4-halo-3-ketobutyric acid ester (III), comprising providing (II) or (III), and contacting (II) with a halohydrin dehalogenase and cyanide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Producing 4-cyano-3-hydroxybutyric acid ester from 4-halo-3-hydroxybutyric acid ester, comprises contacting 4-halo-3-hyd acid ester with halohydrin dehalogenase and cyanide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example 1; SEQ ID NO 8; 168pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
The present invention describes a method (M1) for producing 4-cyano-3-CC hydroxybutyric acid ester (I) from a 4-halo-3-hydroxybutyric acid ester (II) or 4-halo-3-ketobutyric acid ester (III), comprising providing (II) CC or (III), and contacting (II) with a halohydrin dehalogenase and cyanide under conditions sufficient to form a reaction mixture for converting (II) to (I). Also described: (1) producing (N2) a 4-nucleophile CC substituted 3-hydroxybutyric acid ester or amide from (II) or amide, CC or amide with a halohydrin dehalogenase and a nucleophile under CC conditions suitable to form a reaction mixture for converting (II) or amide to a 4-nucleophile substituted-3-hydroxybutyric acid or amide; or (C) contacting (III) or amide with a ketoreductase, a cofactor, a CC cofactor regeneration system, a nucleophile and a halohydrin dehalogenase to form a reaction mixture for converting (III) or amide; or (C) contacting (III) or system, a nucleophile and a halohydrin dehalogenase to form a reaction mixture for converting (III) or amide; and (2) a CC composition (IV) comprising halohydrin dehalogenase, a nucleophile, and (C) is useful for producing a 4-cyano-3-hydroxybutyric acid ester or amide; and (C) a cid ester from a 4-halo-3-hydroxybutyric acid ester or 4-halo-3-cC ketobutyric acid ester. (M2) is useful for producing a 4-nucleophile
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ketoreductase; cofactor; cofactor regeneration system; nucleophile; 4-nucleophile substituted-3-hydroxybutyric acid amide; 4-substituted 3-hydroxybutyric acid derivative; KRED; enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 06-MAY-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 1; SEQ ID NO 2; 168pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          67
```

Producing 4-cyano-3-hydroxybutyric acid ester from 4-halo-3-hydroxybutyric acid ester, comprises contacting 4-halo-3-hyd acid ester with halohydrin dehalogenase and cyanide.

4-halo-3-hydroxybutyric

Example 1; SEQ ID NO 6; 168pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  to form a reaction mixture for converting (III) or amide to a 4-nucleophile substituted.3-hydroxybutyric acid ester or amide; and (2) composition (IV) comprising halohydrin dehalogenase, a nucleophile, are (I) or amide. (M1) is useful for producing a 4-cyano-3-hydroxybutyric acid ester from a 4-halo-3-hydroxybutyric acid ester or 4-halo-3-ketobutyric acid ester. (M2) is useful for producing a 4-nucleophile substituted-3-hydroxybutyric acid ester or amide. (M1) and (M2) are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             under conditions sufficient to form a reaction mixture for converting (II) to (I). Also described: (I) producing (M2) a 4-nucleophile substituted 3-hydroxybutyric acid ester or amide from (II) or amide, comprising: (a) providing (II), (III) or amide; and (b) contacting (II) or amide with a halohydrin dehalogenase and a nucleophile under conditions suitable to form a reaction mixture for converting (II) or amide to a 4-nucleophile substituted-3-hydroxybutyric acid or amide; or (c) contacting (III) or amide with a ketoreductase, a cofactor, a cofactor regeneration system, a nucleophile and a halohydrin dehalogenase to form a reaction mixture for converting (III) or amide with a ketoreductase.

The plant is a crop plant such as maize or soybean. The method of producing a transformed plant having an improved property comprises transforming a plant with the recombinant DNA construct and growing the transformed plant, where the polynucleotide or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for producing plants with improved plant properties, e.g. improved cold, heat or drought tolerance, tolerance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of
                                                                                                                                                                                                                                                                                                             of the cell cycle pathway with plant growth regulators, increased rate homologous recombination, modified seed oil or protein yield and/or content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stre condition, improved lignin production or improved galactomannan production. This sequence represents a bacterial polypeptide used in th scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at segdata.uspto.gov/sequence.html.
                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             promoter functional in a plant cell, where the promoter is position provide for expression of a polynucleotide encoding a polyneptide microbial source. The invention also relates to a transformed plan
